

A Learning Day on:

How to Measure the Impact of HIV Prevention Programmes

Date: 20th October 2010

Time: 1:30– 5.30pm

Venue: Irish Aid Volunteering and Information Centre, 27–31
Upper O'Connell Street, Dublin 1

Objective of the Learning Day:

To increase participants' understanding of how to measure the impact of HIV and AIDS prevention programming in international development work.

This event will consider the HIV prevention evaluation 'crisis' and why it is difficult to show what works. Through structured inputs, case study review and plenary discussions, at the end of the learning day participants will be able to:

- Understand the range of approaches to HIV prevention
- Appreciate the move towards 'Combination Prevention'
- Understand why evidence on effective HIV prevention is weak
- Be aware of the implications for HIV prevention work and evaluation
- Know how to construct HIV prevention outcome and impact indicators
- Understand how to realistically go about evaluating a HIV prevention programme.

This event is jointly organized by the Dochas HIV and AIDS Working Group and DTALK.

Guest Speaker

Sam McPherson, Associate Director: Field Programmes, The International HIV/AIDS Alliance. Sam has over 15 years' experience working in international development, specialising in research, planning and monitoring & evaluation issues. He has key programmatic expertise in HIV and AIDS issues, child centred programming, strategic planning, knowledge management and monitoring, reporting, and evaluation systems.
